# Contents

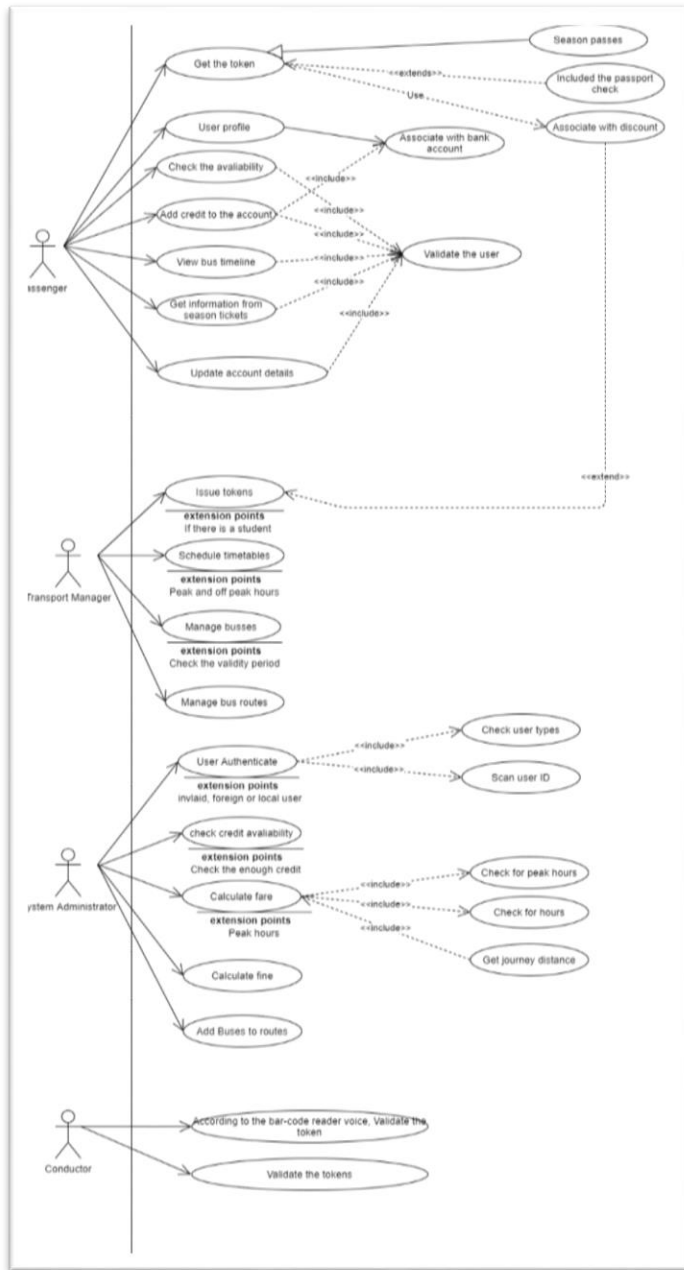

## INTRODUCTION

The Critical Evaluation Report is prepared based on a project which was designed by group 21. The short coming of the project logic were sorted according to the general project specification which was provided. The project was critically evaluated and the report has been prepared.

# SHORTCOMINGS IN UML LOGIC

## Use case

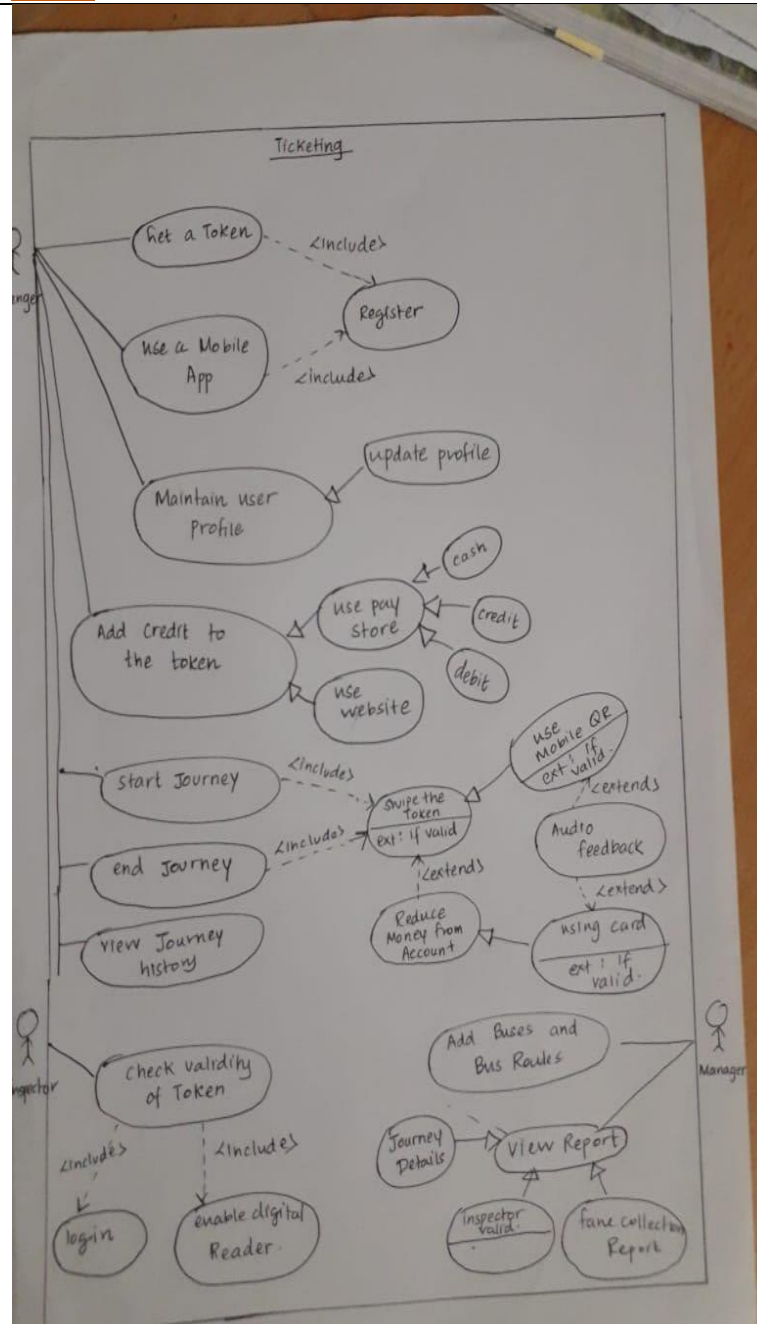

### BEFORE

### Shortcoming of the use case Diagram

- The Passenger should be able to swipe the token once he starts or ends the journey. The use case diagram did not mention any such scenarios.
- The Passenger shall add credits to the account where, the passenger should be able to top up the account using both mobile app and web app. Where this specific responsibility is missing.
- The Passenger should be able to view the trip history this was not included in this diagram.
- The Transport manager should be able to view the reports in addition to his managing task which have been assigned this task was also not mentioned.
- This use case states that calculating fare, calculating fine and adding busses to routes are responsibilities of an inspector.
- Where as the logic according to the case study states that calculating fare and fine are done by the machine in the bus according to the start and end of the journey.

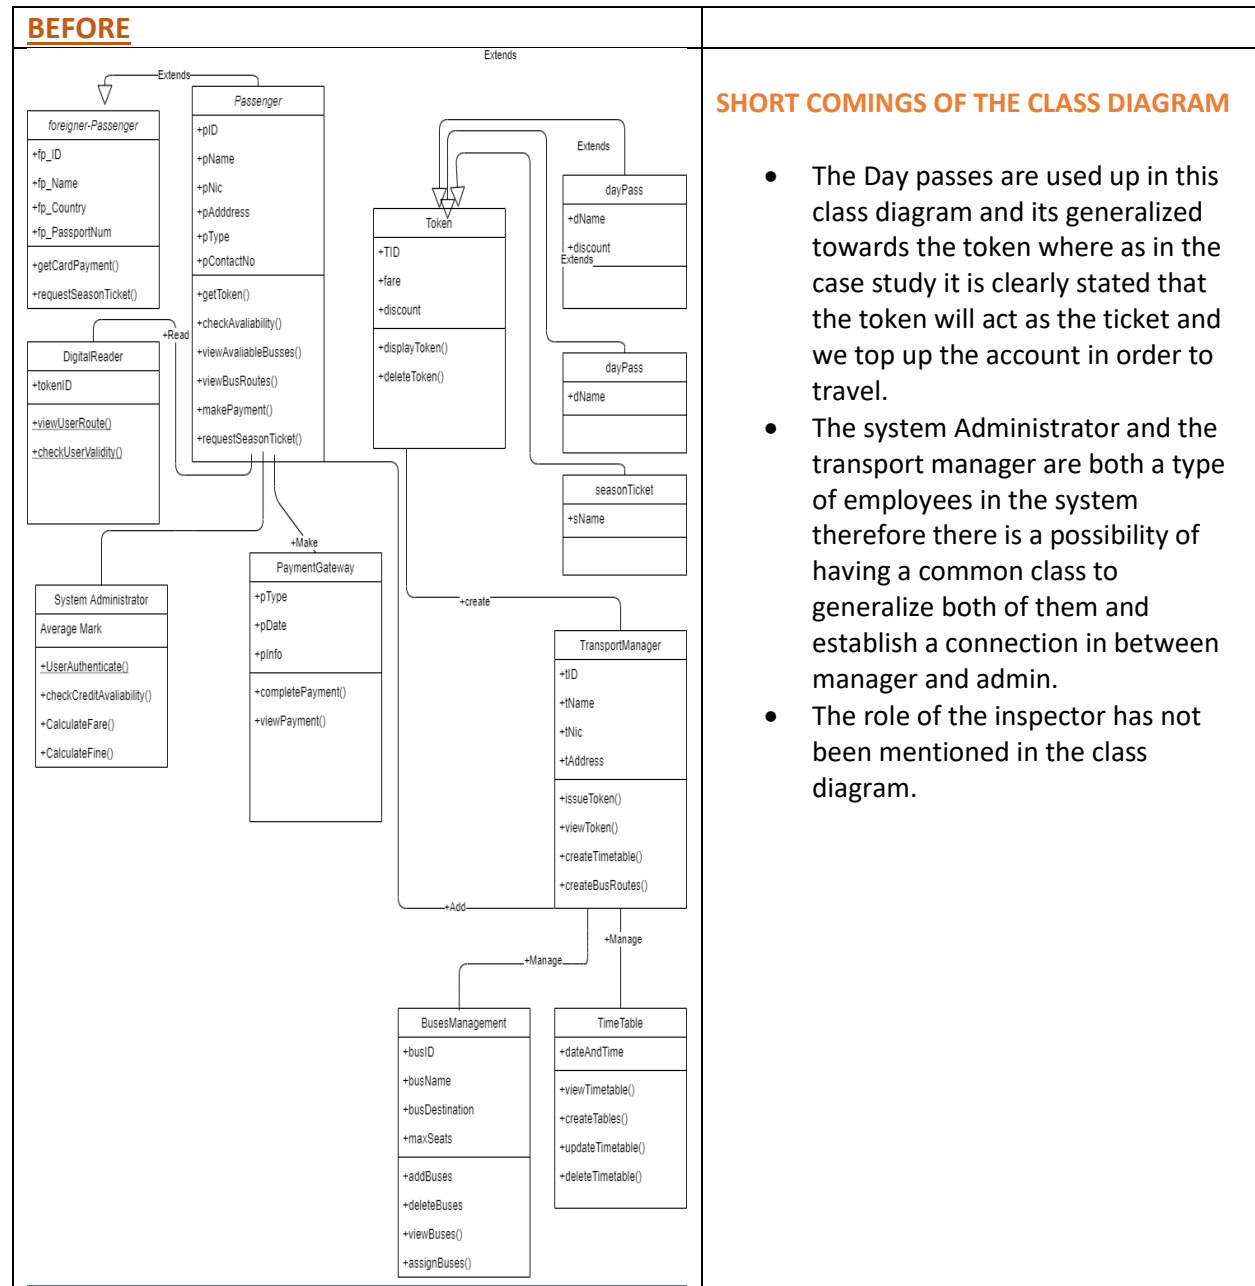

## AFTER

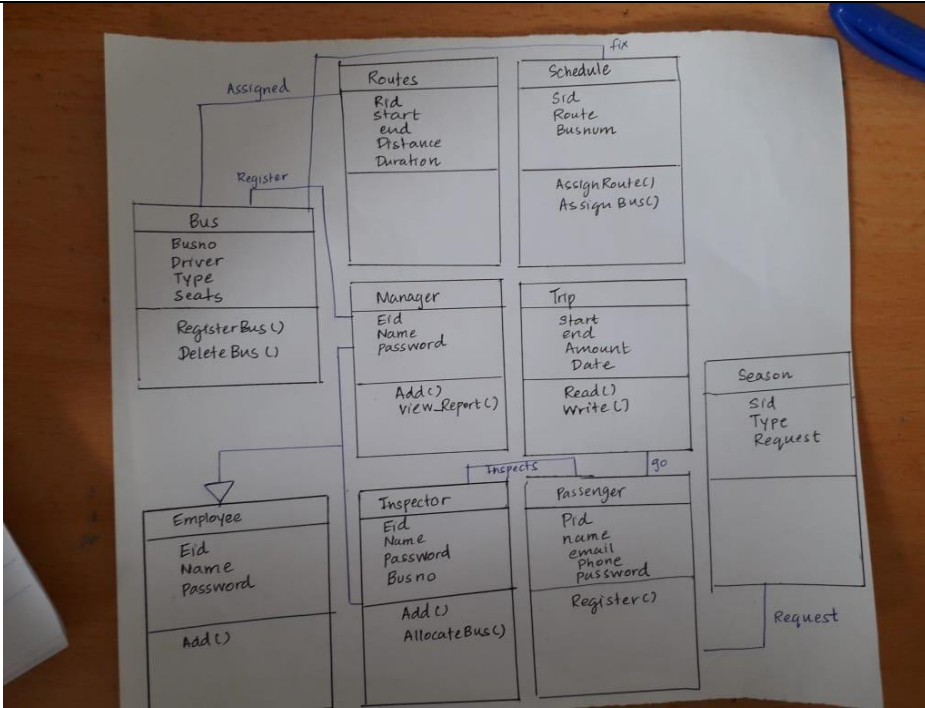

## THE UPDATED CONTENTS

- In this Diagram the payment done in order to top up a token has been clearly elaborated.
- The Token swiping mechanism has been shown in this diagram.
- The inspector unwanted functionalities of the inspector has been removed in this.
- The Manager being able to view the reports has been mentioned.

## 2. Class diagrams

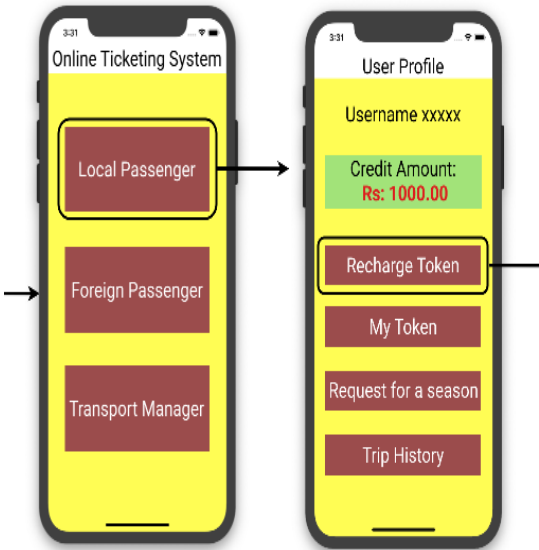

## AFTER

## MODIFIED CLASS DIAGRAM

- An Employee class has been used as a base class for both manager and inspector.
- There is no Admin specific task in the case study, therefore manager is taken up as the only person for managing certain task.

# SHORTCOMINGS IN WIREFRAMES

| BEFORE                                                                                                                                                                                                                                                                                | AFTER                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                      |
| <p><b>Shortcomings</b></p> <ul style="list-style-type: none"> <li>✓ The login was not implementer in the Control flow diagrams.</li> <li>✓ The dividing of the initial UI into 3 categories as Local passenger, Foreign passenger, Transport manager is not user friendly.</li> </ul> | <p><b>Modifications</b></p> <ul style="list-style-type: none"> <li>✓ Any type of user should be able to login therefore implementing a common login and validating them at the backend would be a appropriate.</li> <li>✓ No need to use a separate UI to view the user profile a side menu bar would be more appropriate and user friendly.</li> </ul> |

### Before

3:31

Token ID

Season type

Destination

To

Time

NIC

Next

### After

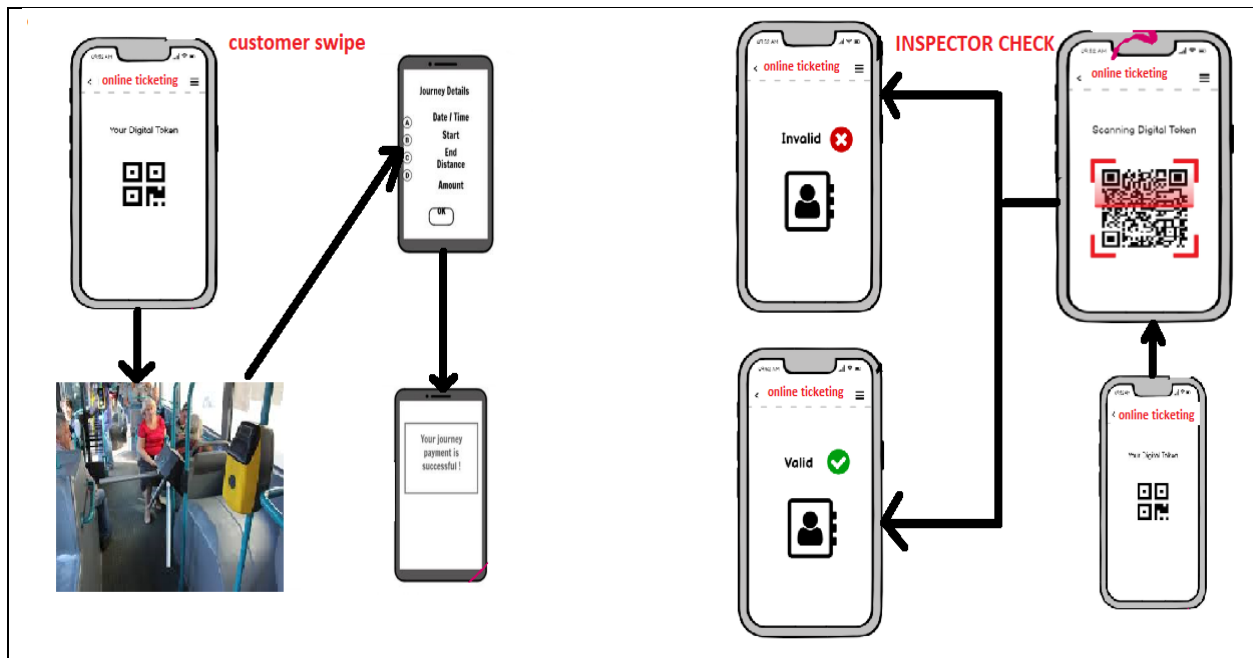

### Shortcomings

- ✓ They have implanted a manual token where as a token implemented must be a digital one.

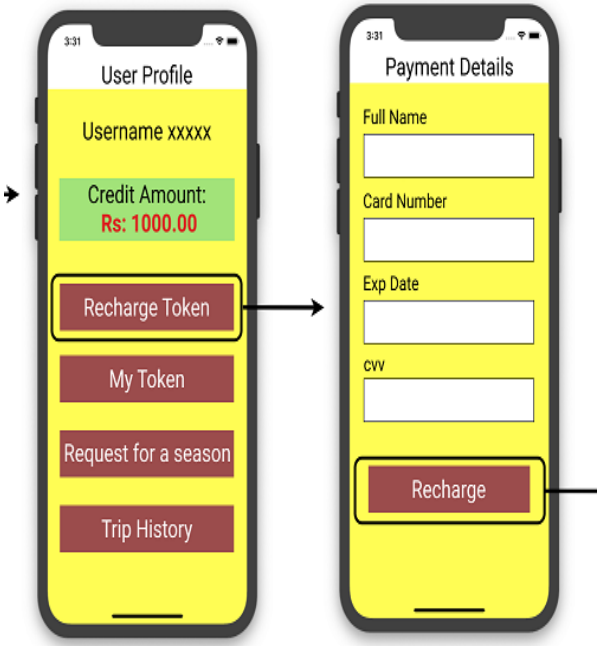

### Modifications

- ✓ Therefore, once the token is created it should be a QR or any other digital ticket.

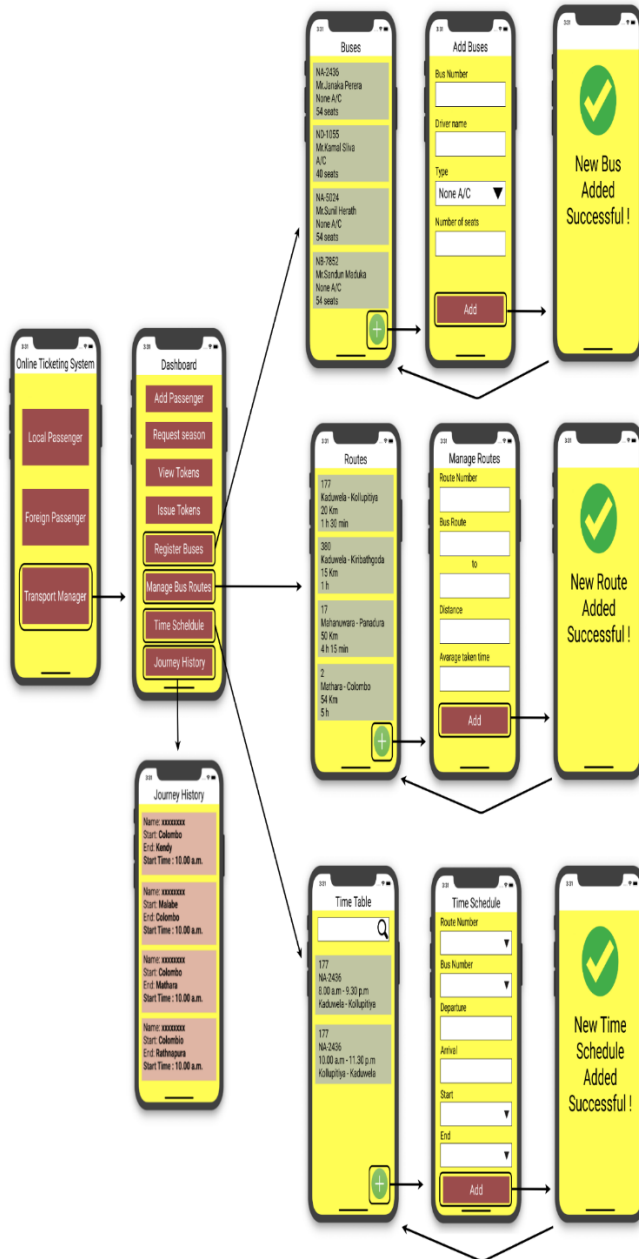

#### Un implemented functionality

- ✓ The involvement of QR was not considered in the previous version therefore we designed a set of QR flows for both the passenger and Inspector.
- ✓ Where as the passenger will extract the details of the start and end of the journey when the token is swiped on the bus scanner.
- ✓ The process in which the inspector been validated is not mentioned in any of the UI.

| <u>Previous</u>                                                                                                                                                                                                                                                                                                                                                                                                      | <u>Modified</u>                                                                                                                                                                                                                                                       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <u>shortcomings</u>                                                                                                                                                                                                                                                                                                                                                                                                  | <u>Modified</u>                                                                                                                                                                                                                                                       |
| <ul style="list-style-type: none"> <li>✓ The payment UI has been prepared and it the full name has been asked which is in appropriate.</li> <li>✓ According to the UI implemented the passenger will have to pay the whole credit amount in one single payment therefore this was not logically withstanding the case study, where as the passenger should be able to pay the amount what he/she desires.</li> </ul> | <ul style="list-style-type: none"> <li>✓ The new payment UI was prepared omitting the full name .</li> <li>✓ The passenger will be able to pay the amount which he/she wanted to pay. Paying multiple times in order to settle the full amount is ensured.</li> </ul> |

## Previous

## Shortcomings

- ✓ In this system it is highly in convenient to maintain the whole bus system in a mobile therefore as per the case study we understood the fact that it is highly required for a web application which can be used. Hence most contents in the UI were not altered. The full system was switched to a web app from a mobile app.

|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Inspector Login  |  A mobile app interface for 'Inspector Login'. It features a yellow background with a dark blue header bar containing the title 'Inspector Login'. Below the header is a dark blue silhouette of a person. Underneath the silhouette are two input fields: 'Username (Inspector ID)' and 'Password'. At the bottom is a dark blue button labeled 'LOGIN'. The status bar at the top shows the time as 6:22 and 38% battery. |
| Inspector Drawer |  A mobile app interface showing a drawer menu. The top section has an orange background with a white silhouette of a person. Below this is a dark blue header bar. A white drawer menu is open on the left, showing two options: 'Home' with a house icon and 'Logout' with a door icon. The status bar at the top shows the time as 6:21 and 38% battery.                                                                 |

## Passenger Login

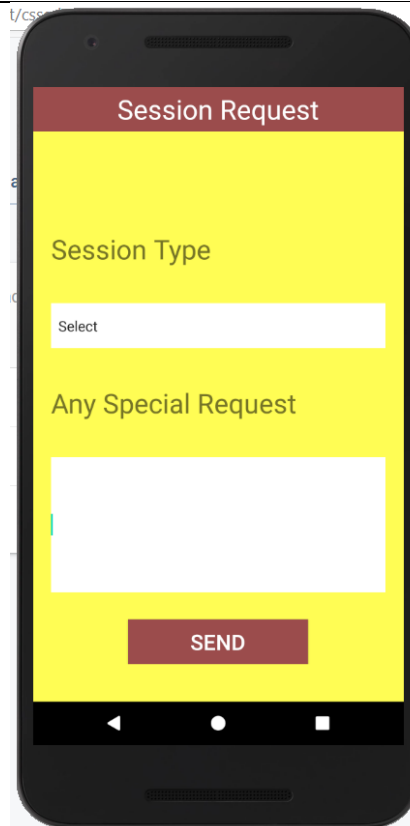

## Passenger App Home

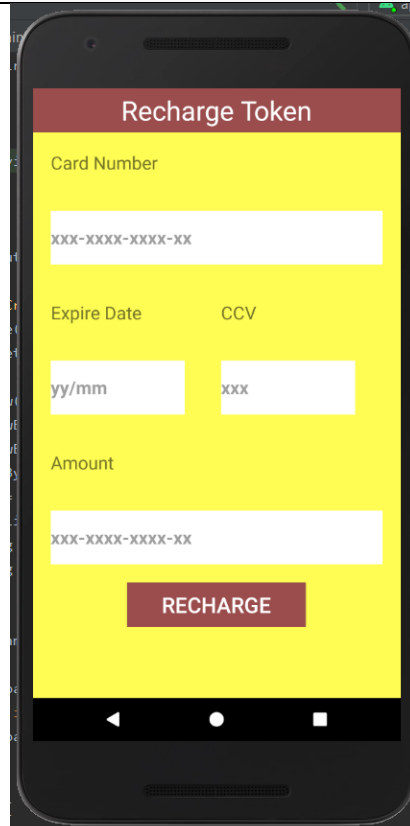

## Season Request

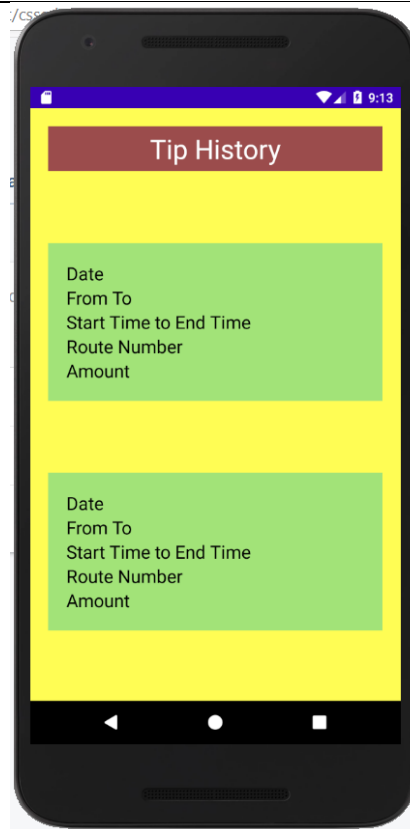

A mobile app interface for a 'Session Request'. The screen has a yellow background and a dark red header with the title 'Session Request'. Below the header, the text 'Session Type' is followed by a white dropdown menu with the word 'Select' inside. Further down, the text 'Any Special Request' is followed by a large white text input area. At the bottom of the form is a dark red button with the word 'SEND' in white. The phone's navigation bar is visible at the very bottom.

## Token Payment

A mobile app interface for a 'Recharge Token'. The screen has a yellow background and a dark red header with the title 'Recharge Token'. Below the header, the text 'Card Number' is followed by a white input field with a placeholder 'xxx-xxxx-xxxx-xx'. Below this, there are two input fields: 'Expire Date' with a placeholder 'yy/mm' and 'CCV' with a placeholder 'xxx'. Further down, the text 'Amount' is followed by another white input field with a placeholder 'xxx-xxxx-xxxx-xx'. At the bottom of the form is a dark red button with the word 'RECHARGE' in white. The phone's navigation bar is visible at the very bottom.
